Order status

READ THIS FIRST

Delivered merchandise excludes freight and canceled orders. On-time rate excludes delivered orders with invalid timing. The last purchase months are partial historical periods; this is not a current operating backlog. Use the tabs below for delivery, products, and quality.

OLIST / Historical portfolio analysis • purchases 2016–2018 • CC BY-NC-SA 4.0 • Zak Rademacher

WHERE DOES DELIVERY NEED REVIEW?

Prioritize by late-order volume, then compare rates. Timing uses actual versus estimated calendar dates.

Month | All by default

TRUST THE NUMBERS

Full-snapshot checks are intentionally unfiltered. Exception events overlap; affected-order counts are distinct.

REFRESH: replace the six source CSVs → run python src/pipeline.py → Power BI Home > Refresh. A failed validation keeps the previous snapshot pointer. No live Kaggle feed or unattended schedule is configured.

METRIC CONTRACT

- Orders: one row per order.
- Items: one row per order item.
- Payments aggregate before joining.
- Late = actual date > estimated date.
- Missing dates are never imputed.
- Category filters affect Items only.

SOURCE & LIMITS

Olist Brazilian E-Commerce Public Dataset via Kaggle. Historical 2016–2018 records, shared under CC BY-NC-SA 4.0. Merchandise is not profit. Payment differences are flagged, not forced to zero. No delivery cause, staffing benefit, or current backlog is inferred. Read the handoff guide for source attribution, refresh setup, definitions, and exception-level CSVs.
